Comprehensive solutions from a world leader

UNION is part of the world leading ASSA ABLOY group, which comprises more than 100 separate companies in 40 countries throughout the world. This vast resource enables us to create total door control solutions for the healthcare market.

Totally integrated solutions for the healthcare sector

ASSA ABLOY (SA) have successfully integrated the **UNION** and SOLID ironmongery ranges under the expanded **UNION** brand. The vast majority of healthcare facilities in southern African, whether Privately or Public owned, have been fitted with locks, door furniture and accessories manufactured by the company or its precursors. The company thus enjoys long-standing partnerships with people who use and maintain healthcare facilities. Consequently it has an in-depth understanding of real needs and a proven ability to develop products and system packages which match the diverse needs of this discerning market segment.

• Security of people and property

Healthcare facilities have to be accessible to a wide spectrum of users, 24 hours a day and 7 days a week, at the same time providing a safe and secure environment to patients, staff and their possessions. Furthermore, the physical assets e.g. fixtures, fittings, specialized equipment and medical supplies of the healthcare facility require protection from theft and abuse. The following are examples of the products which **UNION** offer to meet the above challenges.

High security locks and lock cylinders for doors and security gates

- With restricted key duplication on production of authorization card
- With anti-attack features e.g. jemmy-proof box keeps, hardened steel anti-saw rollers in bolts, anti-drill plates and inserts and anti pick devices to locks and lock cylinders

Hi-tech access control solutions for primary entrances or entrances to secure internal zones

- Electro-mechanical pin tumbler lock cylinders
- Electric striking plates
- Maglocks
- Complete range of electronic keypads, biometric fingerprint and retina ID, magnetic strip, smartcard and transponder operated activators

• Convenience of key control (through Master Keying, Keying Alike and Electro Mechanical lock cylinders)

- Mechanical pin tumbler lock cylinders of varying degrees of security available "master keyed" and "keyed alike" thereby reducing the number of different keys necessary
- Electro-mechanical pin tumbler lock cylinders offering high levels of security, varied and re-programmable keying options; audit trail technology interrogates keys and locks thus determining history of use

• Fire safety of people and property

Public and private hospitals are commonly occupied by dependent patients, awaiting or recovering from illness or treatment. These may be confined to bed or in outpatient facilities. Their dependence and the vast size of certain hospitals, make them vulnerable in the event of fire or other life threatening crises. Hospitals thus require evacuation routes with escape doors. Fire rated doors compartmentalize the buildings into fire containment zones. **UNION** offer a wide range of contemporary door hardware solutions to meet these life safety requirements.

- Panic exit devices (panic latches and bolts) to suit single and double leaf doors CEN certified
- Hydraulic overhead door closers CEN certified for use on fire rated doors
- Fire door control systems, incorporating hydraulic overhead door closers CEN certified for use on fire rated doors with mechanical co-ordinators as well as optional electro-mechanical hold open

• Aesthetically pleasing and ergonomically designed door furniture

Lever and pull handles in a variety of styles, materials and finishes to meet design criteria specific to this segment

- Handles which "return to the door" and avoid snagging of garments and medical equipment
- Satin chrome and bright chrome plated brass, brushed stainless steel and silver anodized aluminium door furniture have surfaces that are simple to maintain and clean

• Cost effective solutions (incorporating energy saving and maintenance free solutions)

UNION offer the following products to ensure energy consumption savings

- Besam automatic swing door, sliding door and revolving door operators
- Hydraulic overhead door closers, floor springs and transom concealed door closers

UNION recognize that healthcare facilities have vast maintenance requirements, whether to property, fixtures, fittings or specialized medical equipment. The company offers a wide spectrum of products and is able to offer the most cost effective, robust and durable products to keep maintenance costs to a minimum.

A partnership for total peace of mind

Involving a **UNION** healthcare specialist early in the design process will deliver benefits beyond a quality product specification, with **UNION** as part of your supply chain, you can be sure that we:

- Fully understand all your requirements
- Have the optimum solution – whatever the application
- Provide packages that meet all the necessary regulations
- Deliver solutions that have been thoroughly tried and tested in similar situations world-wide
- Will provide you with a lean supply chain ensuring maximum value for your investment

Proven Quality

Exacting tests and standards have been employed in the manufacture of all our products, earning **UNION** a worldwide reputation for quality, reliability and performance.

- Where applicable, **UNION** products are designed to meet or exceed CEN and/or SABS test requirements
- Accreditation evidence is readily available for inspection
- Products are manufactured in factories accredited under SABS ISO 9001 Quality Management Systems
